

I-ZAP (Herbal Insecticide)

PRODUCT DESCRIPTION

I-ZAP is a unique molecule derived from plant extracts and oils based on the principles of allopathy. It is suitable to control all sucking pest like: Aphid, Jassid, White fly, Aphid and small stages of Chewing Pest (All Species Including Fall Armyworm), Mites and Mealy Bugs as well. It gives a knock down effect to all pests.

INGREDIENTS

- Garlic oil.
- Acorus calamus.
- Nerium oleander.

ADVANTAGES OVER PRESENT SOLUTIONS

- There are many chemical products are available in market but the pests have become resistant to most of them.
- Chemicals have a very low effective period which leads to increased number of sprays. For different types of pests, we have to take different chemicals which increases the cost to farmer.
- Every now and then a new molecule is offered to control pests and on commercial side the input cost of farmers increases.
- These chemical/synthetic formulations are leading mankind to various which are spreading fast in the community.

DOSAGE

- Create a mix of I-ZAP 4 to 5 ml / liter of water. Spray I-ZAP and is effective for 8 days.
- Need to repeat the spray if crops are highly infected to get effective results.

METHOD OF APPLICATION

- Can be applied using power or knapsack sprayer.
- For best results, it should be sprayed immediately you see the first attack of pest.
- Spray should be done on both sides of the leaves.
