

# ELEAGRON<sup>®</sup> BIO-POTASH (KMB) (Bio Fertilizer)

Eleagron Bio-Potash (KMB) mobilizes required Potassium for target crops increasing the yield, shelf life and improving colour of the grains/fruits; protections the plant against disease causing pathogens and any form of biotic & abiotic stress.

## Benefits

- KMB releases organic acids which solubilises the Potash making it available for plant uptake and also releases plant growth promoting factors increasing the overall growth of the plant.
- Increase the thickness and strength of cell wall.
- Lodging resistance.
- Disease and stress resistance.
- Better fruit set.
- Higher yields.

## Dosage:

Mix 10-30 ml of Eleagron Bio-Potash per litre of water. Use the fertiliser as field application. Apply at the time of sowing and at 30-35 days after sowing. Can also be applied at 60 days after sowing.

**KSB: 1 x 10<sup>8</sup> cells/ml**  
Liquid cell suspension.

## Recommended crops:

Rice, Sugarcane, Wheat, Maize, Legume crops and all horticultural plants.
